In the quadratic formula, the expression underneath the square root sign is called the discriminant of the quadratic equation, and is often represented using an upper case  $D$  or an upper case Greek delta:  $= -$ . A quadratic equation with real coefficients can have either one or two distinct real roots, or two distinct complex roots. In this case the discriminant determines the number and nature ...

QUADRATIC EQUATIONS . A quadratic equation is always written in the form of:  $ax^2 + bx + c = 0$  where  $a \neq 0$ . The form  $ax^2 + bx + c = 0$  is called the standard form of a quadratic equation. Examples:  $x^2 - 5x + 6 = 0$  This is a quadratic equation written in standard form..  $x^2 + 4x = -4$  This is a quadratic equation that is not written in standard form but
