QUADRATIC EQUATIONS

$x^2 - 5x + 6 = 0$ This is a quadratic equation written in standard form. $x^2 + 4x - 4$ This is a quadratic equation that is not written in standard form but can be once we set the equation to: $x^2 + 4x + 4 = 0$. $x = x$ This too can be a quadratic equation once it is set to 0.

The same method can also be applied to non?monic quadratic equations. A non-monic quadratic equation is an equation of the form $ax^2 + bx + c = 0$, where a, b and c are given numbers, and $a \neq 1$ or 0. This is the general case. Thus $2x^2 + 5x + 3 = 0$ is an example of a non?monic quadratic equation.
