This page contains frequently asked questions (and answers!) related to the true random number service RANDOM.ORG, which offers true random numbers to anyone on the Internet. The randomness comes from atmospheric noise, which for many purposes is better than the pseudo-random number algorithms typically used in computer programs.

Randomness is the lack of pattern or predictability in events. A random sequence of events, symbols or steps has no order and does not follow an intelligible pattern or combination. Individual random events are by definition unpredictable, but in many cases the frequency of different outcomes over a large number of events (or "trials") is predictable.

1. Pseudorandom Number Generators. The source of randomness that we inject into our programs and algorithms is a mathematical trick called a pseudorandom number generator.. A random number generator is a system that generates random numbers from a true source of randomness.
