Complexity characterises the behaviour of a system or model whose components interact in multiple ways and follow local rules, meaning there is no reasonable higher instruction to define the various possible interactions.. The term is generally used to characterize something with many parts where those parts interact with each other in multiple ways, culminating in a higher order of emergence ...

Quotes. What information consumes is rather obvious: it consumes the attention of its recipients. Hence a wealth of information creates a poverty of attention, and a need to allocate that attention efficiently among the overabundance of information sources that might consume it.

The jellyroll (or stack of electrodes) of commercial lithium-ion batteries in the current market is a multi-layered structure (see Fig. 2a), and a single repeatable unit consists of a cathode, an anode, and two layers of separator. Further, the cathode is made of an aluminum foil coated on both sides by an active material with a binder.
