Definition. A matrix is a rectangular array of numbers or other mathematical objects for which operations such as addition and multiplication are defined. Most commonly, a matrix over a field F is a rectangular array of scalars each of which is a member of F . Most of this article focuses on real and complex matrices, that is, matrices whose elements are real numbers or complex numbers ...

In mathematics, Fourier analysis ($\int f(x) dx$, $\int f(x) dx$) is the study of the way general functions may be represented or approximated by sums of simpler trigonometric functions. Fourier analysis grew from the study of Fourier series, and is named after Joseph Fourier, who showed that representing a function as a sum of trigonometric functions greatly simplifies the study of heat transfer.
